

Description of programs files

Rino

Dec 13, 2006

1. **cr.embla.do:** This file reads in the questionnaire data and merge the several files composing the questionnaire. It keeps only few variables of interest
2. **cr.tomas.do:** This file reads in rimar cases from the original case-control study. Again selects only few variables
3. **cr.death:** This file appends the death files and creates cause of death
4. **cr.ovarian:** This files creates the cohort study, by merging all the previous files
5. **an_1.ovarian:** This files does some cleaning, based on CM work, and runs **cr.hrt** and **surv.hrt**
6. **cr.hrt:** This file creates all hrt variables
7. **cr.surv:** This file creates all different type of failure variables
8. **ref.paper1_1.do:** Answers to Comments from Reviewers
9. **paper1_1.do:** Table I-IV
10. Files with extension “.new” are the same files as the original ones but they work on the new death information.
